

SAP Analytics Monitoring & Reporting

Monitoring for SAP

SAP's application landscape today larger than ever, helping organizations achieve digital transformation and accelerate innovation. Horitum is here to help navigate all your monitoring needs across SAP's product portfolio.

CHALLENGES WITH SAP

QUALITY

SAP Cloud Platform monitoring
Innovate faster with full stack monitoring for SAP Cloud Platform, powered by AI.

Deliver unrivaled digital user experiences
Manage microservice architectures in hybrid environments
Resolve problems proactively, powered by AI

VISIBILITY

SAP Hybris Monitoring
All-in-one monitoring built for Hybris ECP.

User experience in context to application performance
Auto-discovery and monitoring of all transactions with gap-free, code-level data
Identify performance hotspots in minutes and resolve issues automatically powered by AI

EMPLOYEE PRODUCTIVITY

SAP ERP Monitoring
Solve problems fast with agentless monitoring for your entire SAP landscape.

Proactively monitor all users and SAP transactions, from all locations, through all infrastructure tiers
Quickly detect, prioritize, isolate and resolve SAP issues before they impact your business
Automatically discover and recognize SAP processes and individual user names

SAP Premium Certified
Integration with SAP Applications

Accelerate business innovation with SAP & Hortium

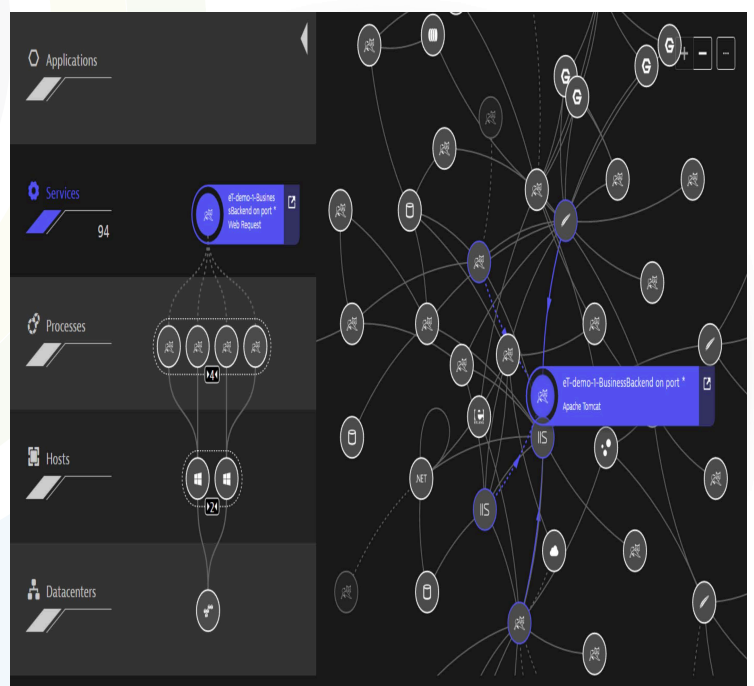

Digital has changed the way we do business today. We've seen an increase in the number of new technologies growing with IoT, end-to-end customer experience, and improvement in operational functionality all propelling the digital transformation market.

SAP is committed to transforming companies into digital enterprises. As organizations embrace a digital transformation strategy, it's key to have insights into performance across these hyperscale, hypercomplex corporate IT environments. Hortium, with an all-in-one monitoring approach powered by artificial intelligence, is the proven partner to monitor SAP's ecosystem.

DASHBOARD

In today's ultra-complex environments, it's not enough to monitor individual components in your technology stack. You need to understand how they all work together collectively to deliver your applications. Hortium automatically monitors and maps out the millions of dependencies among application components in real time—and dynamically auto-updates as things change on the fly. This allows for problems to be detected and prioritized based on their impact to your customers.

Hortium provides a single problem notification that identifies the root cause of the problem. Actionable intelligence about application performance at your fingertips. Full insight into dynamic cloud instances and ephemeral microservices. No gaps or blind spots along the network.

Automated reports

User Oriented Report Designer

Report in Word, Excel, PDF, CSV

Chart options: bar, pie, line, stacked bar

Data Driven. People Focused.
